

Introduction to Databases and SQL – Part 2 Testing your Knowledge

Office of Internal Audit

Kate Head| April 12, 2022

SQL Syntax – Order of Operations

Remember: the database will read the query in the following order:

- **FROM:** Specifies the table to select the columns from
- **WHERE:** Filters the data allowing you to select only some rows
- **GROUP BY:** Summarizes records with the same value(s).
- **SELECT:** Specifies the columns or Select* all the columns.
- **ORDER BY:** Sorts the data based on a particular column(s) use **DESC** or **ASC** to set the sort order.

Understanding ALIAS

Sets an “alias” for a table name or column.

```
SELECT table_name AS alias_name  
FROM table_name
```

Example: `SELECT PS_JOB AS A
FROM PS_JOB`

When reading Query language the first instance of the alias may look like this

A. PS_JOB

Example 1 – PS_JOB_CURR_VW

```
SELECT A.EMPLID
,A.EMPL_RCD
,A.EFFDT
,A.BUSINESS_UNIT
,A.EMPL_STATUS
,A.HR_STATUS
,A.DEPTID
,A.JOBCODE
,A.LOCATION
,A.POSITION_NBR
,A.ACTION
,A.ACTION_REASON
,A.COMP_FREQUENCY
,A.COMPRATE
,A.CURRENCY_CD
,A.SAL_ADMIN_PLAN
,A.GRADE
,A.COMPANY
,A.PAY_SYSTEM_FLG
,A.PAYGROUP
,A.REG_TEMP
,A.FULL_PART_TIME
,A.SETID_DEPT
,A.SETID_JOBCODE
,A.SETID_LOCATION
FROM PS_JOB A
WHERE A.EFFDT = ( SELECT MAX(C.EFFDT) FROM PS_JOB C WHERE C.EMPLID = A.EMPLID AND C.EMPL_RCD = A.EMPL_RCD AND C.EFFDT <=
TO_DATE(TO_CHAR(SYSDATE,'YYYY-MM-DD'),'YYYY-MM-DD'))
AND A.EFFSEQ = (SELECT MAX(D.EFFSEQ) FROM PS_JOB D WHERE D.EMPLID = A.EMPLID AND D.EMPL_RCD = A.EMPL_RCD AND D.EFFDT = A.EFFDT)
AND HR_STATUS = 'A';
```

In this example we are extracting a subset of records from the JOB table which represents one record for each unique EMPLID, EMPL_RCD combination. We want only the latest effective date and effective sequenced record.

We don't want any future dated records.

This will provide us with the job date on the most current job record for each unique EMPLID EMPL_RCD.

Step One: Determine Table & Columns

JOB Table (ALIAS A)
EMPL_RCD
EFFDT
BUSINESS UNIT
EMPLY_STATUS
HR_STATUS
DEPTID
JOBCODE
LOCATION
POSITION_NUMBER
ACTION
Remaining Columns too long to list

FROM
SELECT

This data will be in the out put file which is generated after the
WHERE Clause is applied.

STEP TWO: BREAK DOWN THE WHERE CLAUSE

JOB Table (Alias C)

EMPLID

EMPL_RCD

EFFDT

WHERE A.EFFDT = (SELECT MAX(C.EFFDT) FROM PS_JOB C WHERE C.EMPLID = A.EMPLID AND C.EMPL_RCD = A.EMPL_RCD AND C.EFFDT <= TO_DATE(TO_CHAR(SYSDATE,'YYYY-MM-DD'),'YYYY-MM-DD'))

JOB Table (Alias A)

EMPLID

EMPL_RCD

EFF_DT (is set at Maximums using ALIAS C)

EFF_SEQ (is set a Maximum using ALIAS D)

HR_STATUS (must be A)

JOB Table (Alias D)

EMPLID

EMPL_RCD

EFFDT (uses the already set maximum effective date in A)

EFF_SEQ

AND A.EFFSEQ = (SELECT MAX(D.EFFSEQ) FROM PS_JOB D WHERE D.EMPLID = A.EMPLID AND D.EMPL_RCD = A.EMPL_RCD AND D.EFFDT = A.EFFDT)
AND HR_STATUS = 'A';

Example 2 – U_PAYACTUALS

```
SELECT A.COMPANY, A.PAYGROUP, TO_CHAR(A.PAY_END_DT,'YYYY-MM-DD'), A.PAGE_NUM, A.LINE_NUM, A.OFF_CYCLE, A.SEPCHK, A.EMPLID, A.FIRST_NAME, A.LAST_NAME,
A.EMPL_RCD, A.U_HR_DEPTID, A.POSITION_NBR, A.JOBCODE, A.CA_GL_INTC_RUN, A.U_PAY_PERIOD, A.REVERSED, A.FISCAL_YEAR, A.ACCT_CD,
A.OPERATING_UNIT, A.FUND_CODE, A.ACOUNT, A.DEPTID, A.PRODUCT, A.CHARTFIELD1, A.PROJECT_ID, A.U_BUD_ENT, A.U_FUND_ID, A.U_SAMAS_ACCOUNT, A.U_DIST_SOURCE,
A.U_DIST_CODE1, A.U_DIST_CODE2, A.U_DIST_CODE3, A.U_DIST_AMOUNT, A.HP_RETDIST_SEQ_NO, A.HP_RETDIST_STATUS, TO_CHAR(A.HP_RETDIST_PAY_DT,'YYYY-MM-DD'),
A.U_PERCENT_DISTRIB, A.SAL_ADMIN_PLAN
FROM PS_U_PAYACTUALS_VW A, PS_EMPLMT_SRCH_QRY A1
WHERE ( A.EMPLID = A1.EMPLID
AND A.EMPL_RCD = A1.EMPL_RCD
AND A1.OPRID = 'KHEAD'
AND ( A.PAY_END_DT BETWEEN TO_DATE(:1,'YYYY-MM-DD') AND TO_DATE(:2,'YYYY-MM-DD')
AND A.PAYGROUP LIKE :3
AND A.EMPLID LIKE :4
AND TO_CHAR(A.EMPL_RCD) LIKE :5
AND A.OPERATING_UNIT LIKE :6
AND A.FUND_CODE LIKE :7
AND A.ACOUNT LIKE :8
AND A.DEPTID LIKE :9
AND A.PRODUCT LIKE :10
AND A.CHARTFIELD1 LIKE :11
AND A.PROJECT_ID LIKE :12
AND A.U_BUD_ENT LIKE :13
AND A.U_FUND_ID LIKE :14
AND A.JOBCODE LIKE :15
AND A.SAL_ADMIN_PLAN LIKE :16
AND A.U_HR_DEPTID LIKE :17 ))
```

In this example we are looking a SQL Code which is used to create a table of paycheck actual amounts.

In this example the user of the query can either reflect they want all the records or a subset of the record.

When user runs the Query they enter the selection criteria

Min Pay Period End Date	<input type="text"/>
Max Pay Period End Date	<input type="text"/>
Pay Group	<input type="text"/>
Empl ID	<input type="text"/>
Empl Record	<input type="text"/>
Operating Unit	<input type="text"/>
Fund Code	<input type="text"/>
Account	<input type="text"/>
FAST-GL DeptID	<input type="text"/>
Product	<input type="text"/>
Chartfield 1	<input type="text"/>
Project/Grant	<input type="text"/>
Budget Entity	<input type="text"/>
Fund Id	<input type="text"/>
Job Code	<input type="text"/>
Salary Administration Plan	<input type="text"/>
GEMS DeptID	<input type="text"/>

OK **Cancel**

% is a wildcard used in SQL Server. Other version of SQL use different wildcards to represent “all character fields” WHERE *fieldname* LIKE % will pull all as long as the *fieldname* is a character.

The LIKE command allows the “user input” to be applied. This is like using a variable when scripting in IDEA or ACL.

Step One: Table & Columns

PS_U_PAYACTUALS_VW (ALIAS A)
COMPANY
PAYGROUP
PAY_END_DT
FIRST_NAME
LAST_NAME
EMPL_RCD
U_HR_DEPT_ID
POSITION_NBR
JOBCODE
CA_GL_INTFC_RUN
Remaining Columns too long to list

PS_EMPLMT_SRCH_QRY
EMPLID
EMPL_RCD
OPERID

FROM
SELECT

This data will be in the output file which is generated after the **WHERE** Clause is applied.

FROM PS_U_PAYACTUALS_VW A (Table 1 – A Alias),
PS_EMPLMT_SRCH_QRY A1 (Table 2 – A1 Alias)

Step Two: Where Clause

PS_U_PAYACTUALS_VW (ALIAS A)
EMPLID
EMPL_RCD
OPRID

PS_EMPLMT_SRCH_QRY
EMPLID
EMPL_RCD
OPERID

WHERE A.EMPLID = A1.EMPLID
AND A.EMPL_RCD = A1.EMPL_RCD
AND A1.OPRID = 'KHEAD'

PS_EMPLMT_SRCH_QRY is added automatically to the online SQL. The record involves the department tree to allow users to see data they are allowed to.

Step Three: Identify User Defined Variables (LIKE)

Field /Column	LIKE	User Input	SQL CODE
A.PAY_END_DT	1 2	% or Date begin % or Date end	AND (A.PAY_END_DT BETWEEN TO_DATE(:1,'YYYY-MM-DD') AND TO_DATE(:2,'YYYY-MM-DD')
A. PAYGROUP	3	% or Pay group	AND A.PAYGROUP LIKE :3
A. EMPLID	4	% or specific EMPLID	AND A.EMPLID LIKE :4
To Char (E.EMPL.RD)*	5	% or specific EMPLRCD	AND to_char(A.EMPL_RCD) LIKE :5
A. OPERATING_UNIT	6	% or Operating Unit	AND A.OPERATING_UNIT LIKE :6
A. FUND_CODE	7	% or Fund code	AND A.FUND_CODE LIKE :7
A. ACCOUNT	8	% or Account	AND A.ACCOUNT LIKE :8
A. DEPTID	9	% or Department ID	AND A.DEPTID LIKE :9

*Since this field was numeric it was converted to Character

Variables

Field /Column	LIKE	User Input	SQL CODE
A. PRODUCT	10	% or	AND A.PRODUCT LIKE :10
A. CHARTFIELD1	11	% or initiative (chartfield 1)	AND A.CHARTFIELD1 LIKE :11
A. PROJECT_ID	12	% or Project ID	AND A.PROJECT_ID LIKE :12
A. U_BUD_ENT	13	% or budget entity	AND A.U_BUD_ENT LIKE :13
A. U_FUND_ID	14	% or Fund id	AND A.U_FUND_ID LIKE :14
A. JOBCODE	15	% or job code	AND A.JOBCODE LIKE :15
A. SAL_ADMIN_PLAN	16	% or salary admin plan	AND A.SAL_ADMIN_PLAN LIKE :16
A. U_HR_DEPTID	17	% or HR department ID	AND A.U_HR_DEPTID LIKE :17

*Since this field was numeric it was converted to Character

Example 3 – U_PAYROLL_POSTING_LEDGER

```

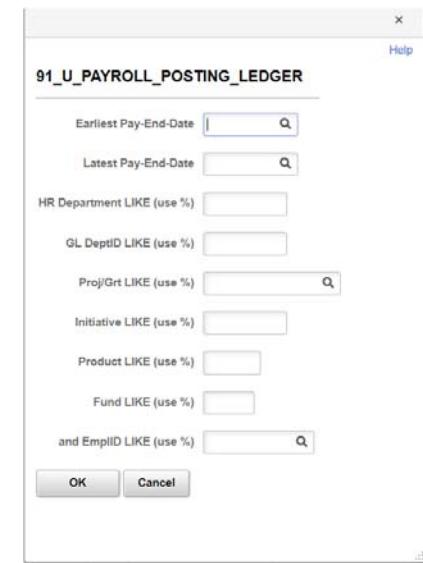

SELECT D.RUN_ID, TO_CHAR(A.PAY_END_DT,'YYYY-MM-DD'), A.U_HR_DEPTID, B.LAST_NAME, B.FIRST_NAME, A.EMPLID, A.EMPL_RCD, A.POSITION_NBR, A.JOBCODE, C.SAL_ADMIN_PLAN, C.PAYGROUP, C.FTE, A.SEPCHK, A.OFF_CYCLE,
A.HP.RETDIST_SEQ_NO, A.HP.RETDIST_STATUS, TO_CHAR(A.HP.RETDIST_PAY_DT,'YYYY-MM-DD'), TO_CHAR(A.HP.CORRECTED_DT,'YYYY-MM-DD'), A.OPERATING_UNIT, A.DEPTID, A.FUND_CODE, A.PRODUCT, A.CHARTFIELD1,
A.PROJECT_ID, MAX(E.U_SAMAS_ACCOUNT), A.U_PERCENT_DISTRIB, C.COMPRATE, A.U_AP_EARNNS, A.U_FAC_EARNNS, A.U_USPS_EARNNS, A.U_OPS_EARNNS, A.U_GA_EARNNS, A.U_GA_PHD_EARNNS,
A.U_POSTDOC_EARNNS, A.U_RES_EARNNS, A.U_ADMIN_EARNNS, A.U_BONUS_EARNNS, A.U_CELL_ALLOWANCE, A.U_DATA_ALLOWANCE, A.U_HEALTH_MATCH, A.U_LIFE_MATCH, A.U_RETIRE_MATCH, A.U_FICA_MATCH,
A.U_PRE_TAXDED_AMT, A.U_LEAVE_ALLOC_AMT, A.U_DISABILITY_AMT, (A.U_AP_EARNNS + A.U_ADMIN_EARNNS + A.U_BONUS_EARNNS + A.U_FAC_EARNNS + A.U_OPS_EARNNS + A.U_GA_EARNNS + A.U_GA_PHD_EARNNS +
A.U_FICA_MATCH) + A.U_POSTDOC_EARNNS + A.U_RES_EARNNS + A.U_USPS_EARNNS + A.U_CELL_ALLOWANCE + A.U_DATA_ALLOWANCE + A.U_HEALTH_MATCH + A.U_LIFE_MATCH + A.U_RETIRE_MATCH + A.U_DISABILITY_AMT +
A.U_PRE_TAXDED_AMT + A.U_LEAVE_ALLOC_AMT + A.U_FICA_MATCH), D.CA_GL_INTCR_RUN
FROM PS_U_PAYDIST_EDT_V A, PS_PERSONAL_DATA B, PS_PERALL_SEC_QRY B1, PS_JOB C, PS_EMPLMT_SRCH_QRY C1, PS_PAY_CALENDAR D, PS_ACCT_CD_TBL E
WHERE (B.EMPLID = B1.EMPLID
AND B1.OPRID = 'KHEAD'
AND C.EMPLID = C1.EMPLID
AND C.EMPL_RCD = C1.EMPL_RCD
AND C1.OPRID = 'KHEAD'
AND (A.PAY_END_DT BETWEEN TO_DATE(:1,'YYYY-MM-DD') AND TO_DATE(:2,'YYYY-MM-DD')
AND (A.U_HR_DEPTID LIKE :3
AND A.DEPTID LIKE :4)
AND (A.PROJECT_ID LIKE :5
AND A.CHARTFIELD1 LIKE :6
AND A.PRODUCT LIKE :7
AND A.FUND_CODE LIKE :8)
AND A.EMPLID LIKE :9)
AND B.EMPLID = A.EMPLID
AND C.EMPLID = A.EMPLID
AND C.EMPL_RCD = A.EMPL_RCD
AND C.EFFDT =
(SELECT MAX(C_ED.EFFDT) FROM PS_JOB C_ED
WHERE C.EMPLID = C_ED.EMPLID
AND C.EMPL_RCD = C_ED.EMPL_RCD
AND C_ED.EFFDT <= A.PAY_END_DT)
AND C.EFFSEQ =
(SELECT MAX(C_ES.EFFSEQ) FROM PS_JOB C_ES
WHERE C.EMPLID = C_ES.EMPLID
AND C.EMPL_RCD = C_ES.EMPL_RCD
AND C.EFFDT = C_ES.EFFDT)
AND A.COMPANY = D.COMPANY
AND A.PAYGROUP = D.PAYGROUP
AND A.PAY_END_DT = D.PAY_END_DT
AND E.OPERATING_UNIT = A.OPERATING_UNIT
AND E.FUND_CODE = A.FUND_CODE
AND E.PRODUCT = A.PRODUCT
AND E.PROJECT_ID = A.PROJECT_ID
AND E.CHARTFIELD1 = A.CHARTFIELD1
AND E.DEPTID_CF = A.DEPTID ))

```

This example is a query used to run the payroll posting ledger. It allows user defined fields which are interpreted in the same manner as the example 2.

This example comes from Peoplesoft Query Manager. Each of the fields are given an Heading Text which is not in this SQL Script Example above due to its length. The can be found in tab Fields in Query Manager

PeopleSoft Query Manager Example

< Records **Query Manager**

Records **Query** Expressions Prompts Fields Criteria Having View SQL Run

Query Name 91_U_PAYROLL_POSTING_LEDGER Description Must use % in any blank field
Click folder next to record to show fields. Check fields to add to query. Uncheck fields to remove from query. Add additional 20 records by clicking the records tab. When finished click the fields tab.
